

ROSMIT GYAWALI

AI Engineer • Python • LangChain • LLM Systems

Sydney, Australia • Australian Work Rights | rosmi000@gmail.com | +61 403 960 903 | LinkedIn | GitHub | Portfolio

Summary

Aspiring AI Engineer with hands-on experience building production LLM systems using Python, LangChain, and Docker containerization. Skilled in RAG pipelines, prompt engineering, and AI output evaluation with disciplined validation practices. Brings practical expertise in production deployments, CI/CD quality gates, and end-to-end system ownership across cloud platforms.

Technical Skills

Programming Languages: Python, SQL

AI & LLM Frameworks: LangChain, LlamaIndex, Claude API, Codex, RAG pipelines, prompt engineering, LLM evaluation, LLM-as-judge, agent workflows, tool calling

Cloud & DevOps: Docker containerization, GCP Cloud Run, GitHub Actions, CI/CD pipelines, REST APIs, PostgreSQL, observability

ML Libraries & Tools: PyTorch, Scikit-learn, Hugging Face, RAGAS, LangSmith, DSPy, FastAPI, Pandas, NumPy

Automation & Engineering: Git, GitHub, Selenium, Scrapy, ETL pipelines, AI-assisted code review, automated testing, schema validation

Professional Experience

Western Sydney University

2024 – 2025

Data Science Research Fellow

Sydney, NSW

- Designed and ran reproducible PyTorch experiments comparing neural-network training approaches on CIFAR-10 and CIFAR-100 using GPU/HPC infrastructure and SLURM — evaluated accuracy, runtime, memory, and compute behaviour.
- Documented all experimental configurations, results, and findings in structured reports for supervisor review and reproducibility.

Study Info Centre

2020 – 2022

Data Scraper / Python Developer

Sydney, NSW

- Built and maintained automated data collection workflows using Python, Selenium, and Scrapy across 10+ sources — replacing manual processes with reliable repeatable pipelines.
- Developed ETL pipelines with schema validation and anomaly detection using Python, SQL, and PostgreSQL — identified and resolved data quality issues end-to-end.

Selected Engineering Projects

Financial Document Intelligence | *Python, LangChain, LlamaIndex, Docker, FastAPI, PostgreSQL* | [GitHub](#)

- Built a production-oriented RAG system using LangChain and LlamaIndex with hybrid retrieval, role-based access control enforced at SQL level, and containerized with Docker for cloud deployment.
- Implemented automated RAGAS evaluation suite integrated with GitHub Actions CI/CD pipeline — quality gates block deployments when faithfulness or precision metrics drop. **Result: faithfulness 0.955, context precision 0.900.**
- Traced system execution with LangSmith for observability and performance monitoring across production workloads.

Email Regression Detector | *Python, PostgreSQL, Claude API, GitHub Actions* | [GitHub](#)

- Built an automated AI output evaluation pipeline — ran 50 hand-labelled test cases through a classifier, scored outputs with LLM-as-judge, and detected case-level regressions before release.
- Integrated GitHub Actions quality gates with warning and blocking thresholds, Slack alerts, and HTML diff reports confirming expected behaviour before and after changes. **Result: 94% accuracy, 4.88/5 judge score, ~\$0.018 per evaluation run.**

Education

Western Sydney University

July 2025

Bachelor of Data Science

Sydney, NSW

- **Dean's List**
